[REDACTED] On Tuesday morning the 22nd I visited [REDACTED] to discuss a possible modification of the plotters we are buying from them. The modification as requested by IPD is to provide a end of paper sensor. After disucssing the problem, [REDACTED] stated that they were going to incorporate this feature in their future models, butdid not feel they were in a position to retrofit our equipment for sometime. They indicated how they proposed doing it and suggested I find a job shop to do the work. They felt it could be done faster and cheaper this way. I have since discussed this with [REDACTED] and he is going to have the TSD shop look into it.
